

# Model Limitations and Usefulness

- ❖ Since data was analyzed at the CSCI level, effort models may not be appropriate for projects reported at the Roll-Up Level.
- ❖ Do not use Effort Estimation Models if your input parameters are outside of the model's dataset range.
- ✓ Proposed Effort Models may be used to either crosscheck or validate contract proposals as input parameters used in the study are typically available during proposal evaluation phase
- ✓ Applicable for both, Defense and Business Systems
- ✓ Applicable for Agile and non-Agile Software Projects
