Challenges for Cost Estimators: The Decision-Making Process

Are We Enabling Better Decision-Making?

Michael Lionais, Executive Director Costing Centre of Expertise, Office of the Comptroller General Treasury Board Secretariat Ottawa, Ontario

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 Canada In-Brief

- Canada means village in Huron
- Cabot's journey from Bristol to Canada took about 35 days
- Population: 36.2 million (fewer people than Tokyo's metropolitan area)
- 2nd largest country in the world with the longest coastline
- More lakes than the rest of the world's lakes combined, containing 20% of the world's fresh water
- 3rd largest oil reserves in the world
- Ranked 10th in GDP in 2015 (about half the UK's GDP) and ranked 8th in income per capita in 2012 (UK was 13th in the study)
- Constitutional monarchy with a Westminster parliamentary system

GOVERNMENT HAS MADE IMPORTANT COMMITMENTS TO CANADIANS A COMPREHENSIVE AND AMBITIOUS PLAN

Treasury Board is to lead the government's efforts to ensure that departments and other federal organizations are able to use the best available information. Responsible governments rely on sound evidence to make decisions to ensure we obtain good value for our money.

Mandate Letter – President, Treasury Board

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 UNCLASSIFIED / NON CLASSIFIÉ Major Crown Project Costs are Understated

- Budgets for major Crown projects generally increase with time
- In setting budgets, Cabinet is presented with a cost that includes contingency, but best and worst cases are not formally presented
- When Cabinet approves a single number, the only thing for certain is that the number will change

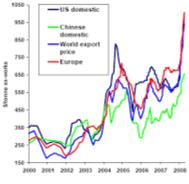

Decisions are being made with a limited understanding of the financial impact of program risks

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 Understanding Financial Risk

 A lack of contextual information often hinders decision-maker's ability to fully understand the financial risks associated with a project

Cost estimates are subject to change based on a number of factors including: scope, framing assumptions, fluctuations in key input costs over time, implementation schedule, etc.

Source: Steel Benchmarker, Macquarie Research, April 2008

Presenting cost estimates as a single value does not provide sufficient contextual information to support evidence-based decision-making

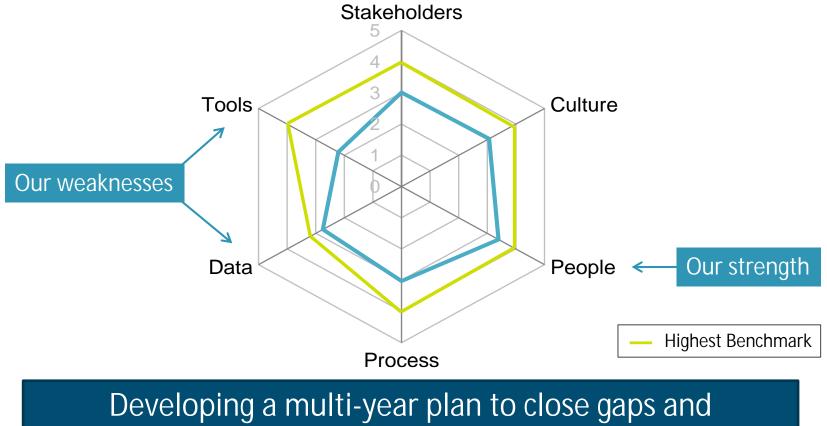

Decision-makers and Canadians are often surprised when updated costs vary significantly from earlier estimates

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 Costing Centre of Expertise

- Mandated to increase the robustness of cost estimates presented to Cabinet for consideration
- Initially focused on reviewing cost estimates as they were submitted to Cabinet
 - 2/3 of submissions had issues
- Learned that we needed to look outwards and professionalize the cost estimating community across the Government of Canada

• Completed an evidence-based gap assessment: Where We Are vs. Where We Want to Be

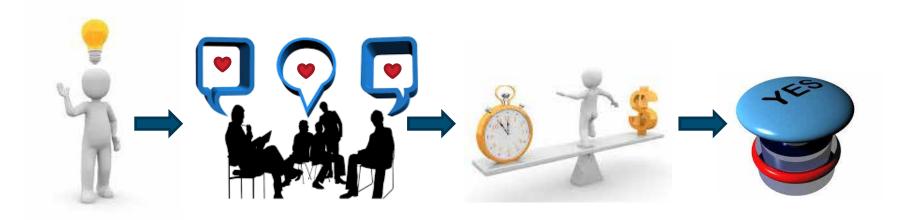

improve overall results with benchmarks

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 UNCLASSIFIED / NON CLASSIFIÉ Part 2: The Science of Decision-Making

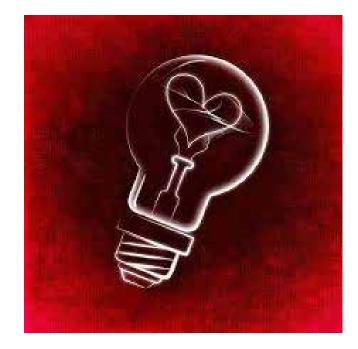

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 UNCLASSIFIED / NON CLASSIFIÉ The Brain: How Are Decisions Made?

General belief is that decisions are made subsequent to deliberation/consideration of all information – including cost

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 UNCLASSIFIED / NON CLASSIFIÉ The Brain: How Are Decisions Made?

Research shows that decisions are made on the basis of EMOTIONS

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 UNCLASSIFIED / NON CLASSIFIÉ How Emotions Affect Decision-Making

- Working through the pros and cons of various options can be overwhelming
- Emotions are designed to appraise and summarize an experience and inform actions
- Emotional reactions can:
 - Direct our attention and energy toward the most relevant aspects of a proposal, from our own perspective;
 - × Lead to misguided/poor decisions

Without an emotional trigger, no one makes a decision.

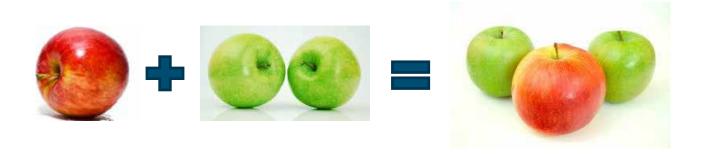

Gino, Francesca. "Don't Let Emotions Screw Up Your Decisions." HBR.org. 6 May 2015

- Ideas are often discussed before official presentations and in-depth analysis take place
 - This is often the stage where either positive or negative emotions are attached to an idea and a decision is made...
- Can cost estimates be part of the decision-making process and be associated with positive emotions?

While emotions drive decisions, our success may hinge on our ability to understand and interpret them

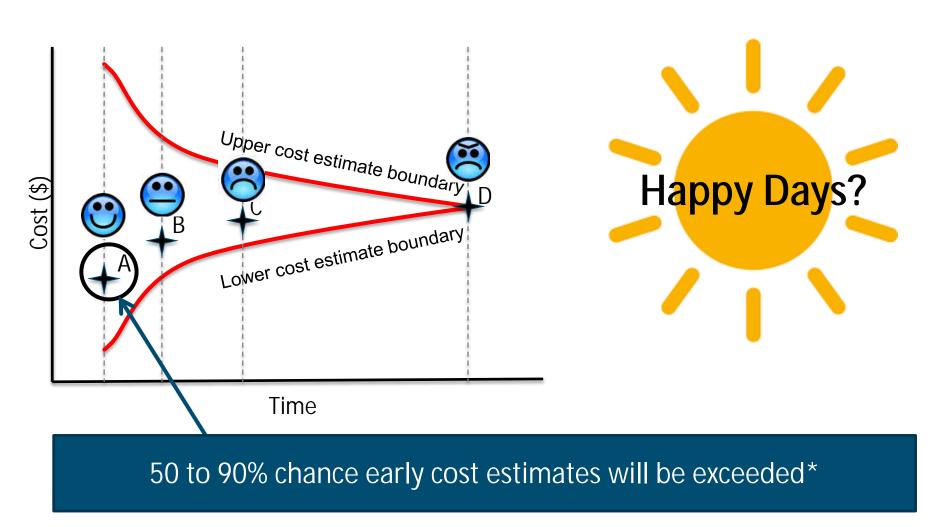

• The human brain thinks in terms of images – not numbers

• How do cost estimators (and other finance professionals) present information in a neutral or positive way in order to increase their contribution to the decision-making process?

UNCLASSIFIED / NON CLASSIFIÉ

Analyzing the Evidence

* Peter R Garvey, Brian Flynn, Peter Braxton & Richard Lee (2012), "Enhanced Scenario Based Method for Cost Risk Analysis: Theory, Application and Implementation", Journal of Cost Analysis and Parametric s, 5:2, pg 114

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 UNCLASSIFIED / NON CLASSIFIÉ Perceptions of Financial Professionals

- Decision-makers often view financial professionals as:
 - Inward focused
 - Rule-bound
 - The centre for control versus the centre for guidance
 - Process oriented versus results-oriented
 - Adding overhead costs to program management

<u>Perception</u>: Focus only on the negative aspects of a proposal

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 Discussion of Ideas

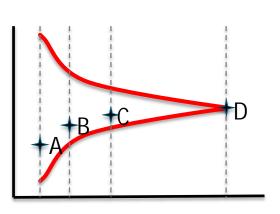

Positive emotions

UNCLASSIFIED / NON CLASSIFIÉ

Cost Estimator's Input (Reality Check)

Negative emotions

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 Building Knowledge

Mantra: "Let the evidence speak for itself."

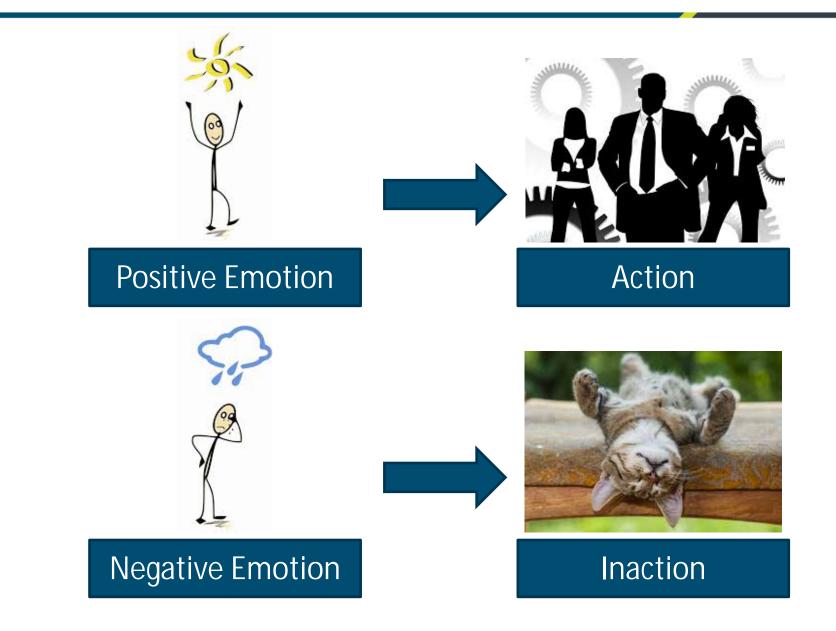

Building Knowledge

Are we transforming the evidence into knowledge when negative emotions are being evoked?

UNCLASSIFIED / NON CLASSIFIÉ

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 **People Seek Positive Emotions**

UNCLASSIFIED / NON CLASSIFIÉ

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 U A Commitment Has Been Made

Increase the Budget

Negative Emotion

Accept the Risk

- Why will decision-makers choose to accept a risk (inaction) rather than incur a negative emotion (increase the budget)?
 - People are intrinsically optimistic
 - Information overload people will focus on the elements of the proposal that support their idea/belief
 - The long-term nature of complex decisions means that most decisionmakers are not around for the results

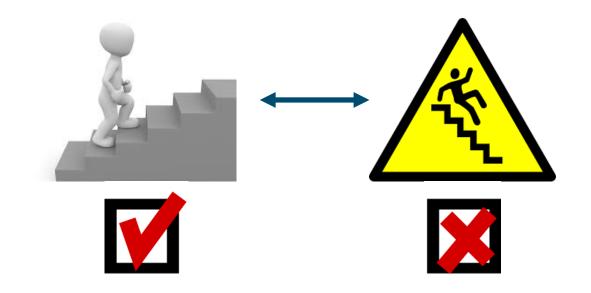

Presented at the 2016 International Training Symposium: www.iceaaonline.com/bristol2016 UNDER COMPUTED COMPUTED

- Decision-makers link numbers to personal experiences and/or images to generate insights
 - We need to help them to create the right images positive emotions

The Question

In disclosing the financial risk of a proposal, are we creating a negative reaction which will cause decision-makers to take excessive risk?
