

Automated Data Collection

PRICE Systems, LLC

Agenda

- Introduction and Motivation
- Data Collection Challenges
- Introduction to RapidMiner Capabilities
- RapidMiner - Crawling the Web
- Implementation
- Future Directions

- **Data Collection is a necessary evil for cost estimators**
 - To support the creation of Cost Estimating Relationships (CERs)
 - To support estimating by analogy
 - To support selection of input values for cost estimating models

- **Data collection is hard**
 - Data is often hard to find
 - Even when data is found it is often hard to mine as the process is tedious and time consuming
 - Data is often very noisy making it hard to understand and work with

- Original motivation for this work arose from efforts around an overhaul of the TruePlanning[®] Information Technology Services Cost Model
- Many of the models we developed for IT Services required commodity pricing information
- Commodity pricing is hard to estimate because
 - Prices are constantly changing
 - Many companies have negotiated agreements with specific vendors
 - There are many things that drive commodity pricing outside of the scope of a typical cost estimating relationship

- **Finding the right data**
 - Accurate pricing data
 - Significant technical and specification information
 - Normalization across multiple vendors

- **Keeping the data up to date**
 - Commodity prices change frequently – based on market factors, supply and demand, etc.
 - Good pricing data from last quarter is unlikely to be relevant in this quarter

- **Need a solution that is**
 - Repeatable
 - Consistent
 - Can be accomplished quickly with the push of a button
 - Can be updated regularly (monthly, quarterly, bi-annually) without extensive time investment

- Open Source application
- RapidMiner 5.3 and 7.2 currently available for download from <http://rapidminer.software.informer.com/5.3/>
<https://my.rapidminer.com/nexus/index/html#downloads>
- Licensed under GMU Affero General Public License version 3
- User friendly, graphical user interface that allows for data collection and analysis

Summary of RapidMiner Capability

■ Data Transformation

- Filtering
- Sorting
- Replacing Missing values in a data set
- Aggregation, etc.

■ Modeling

- Classification
- Clustering
- Correlation, etc.

■ Evaluation

- Validation
- Regression
- Significance, etc.

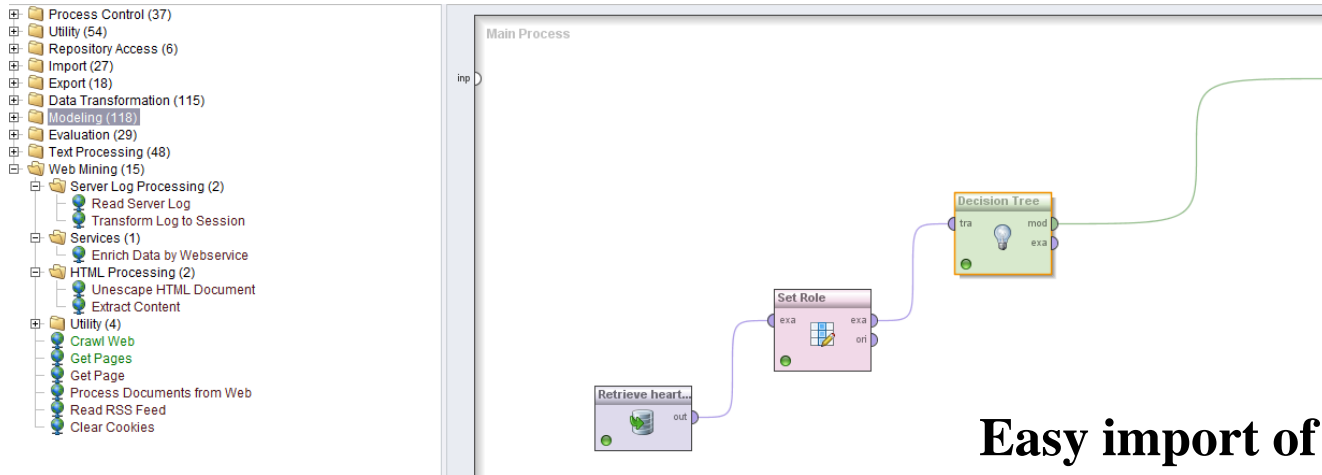

■ Text Processing

- Extraction
- Transformation
- Extraction
- Tokenization, etc.

■ Web Mining

- Server Log Processing
- HTML Processing
- Web Crawling
- Read RSS Feed, etc.

Drag and Drop Interface to Build Processes

Easy import of data from Excel

```

Starting with a webpage that is setup where you can view list of products:

- **Get Page**
 - Sends RapidMiner out to product page URL
 - Example: http://www.tigerdirect.com/applications/category/category_slc.asp?page=1&Nav=|c:4935|&Sort=3&Recs=10
- **Process Documents**
 - Uses Xpaths to grab product links
- **Get Pages**
 - Sends RapidMiner out to each product link that it grabbed in Process Documents
- **Process Documents from Data**
 - Uses Xpaths to grab product specifications on each product page

Implementation to Support Commodity Pricing Data Collection

Parameters window for the 'Get Page' step:

- url:
- random user agent
- user agent:
- connection timeout:

Process Documents window showing an 'Extract Information' dialog with the following table:

attribute name	query expression
product1	(//h3[@class="itemName"]/h.a)[href[1]]
product2	(//h3[@class="itemName"]/h.a)[href[2]]
product3	(//h3[@class="itemName"]/h.a)[href[3]]
product4	(//h3[@class="itemName"]/h.a)[href[4]]
product5	(//h3[@class="itemName"]/h.a)[href[5]]
product6	(//h3[@class="itemName"]/h.a)[href[6]]
product7	(//h3[@class="itemName"]/h.a)[href[7]]
product8	(//h3[@class="itemName"]/h.a)[href[8]]
product9	(//h3[@class="itemName"]/h.a)[href[9]]
product10	(//h3[@class="itemName"]/h.a)[href[10]]
product11	(//h3[@class="itemName"]/h.a)[href[11]]

Combining into one process

The screenshot displays a workflow automation interface with a process flow and a parameter list dialog.

Process Flow:

- Category URLs** (orange box) feeds into **Make selection** (purple box).
- Make selection** feeds into **Subprocess** (orange box).
- Subprocess** feeds into **Select Subprocess (2)** (orange box).
- Select Subprocess (2)** feeds into **Replace (11)** (purple box).
- Replace (11)** feeds into **Remove unwanted a...** (purple box).
- Remove unwanted a...** feeds into **Write Excel** (purple box).
- Handle Exception (2)** (orange box) and **Process Documents...** (purple box) are connected to the **Subprocess** step.

Parameters Dialog: Edit Parameter List: attribute values

This parameter defines the attributes and their values in the single example returned.

attribute n...	attribute value

Buttons: Add Entry, Remove Entry, Apply, Cancel

Process to find relevant pages when webpage has various product links to follow:

- **Crawl Web**

- Start at the highest level URL for each product

- Example: <http://www.dell.com/us/business/p/laptops>

- Crawling rules will send RapidMiner out to any URL matching your search

- **Process Documents from Data**

- Uses Xpaths to grab product specifications on each product page

Implementation to Support Commodity Pricing Data Collection

The screenshot displays a workflow automation interface. The main process flow includes steps like 'Crawl Web', 'Process Docu...', 'Replace', 'Replace (2)', 'Replace (3)', 'Replace (4)', 'Filter Examples', 'Rename', 'Remember Attri...', and 'Write Excel'. A configuration window for 'Crawl Web' shows settings for 'url' (http://www.dell.com/us/business/laptops), 'max pages' (100), 'max depth' (2), 'domain' (server), 'delay' (2000), 'max threads' (4), 'max page size' (1000), and 'user agent' (rapid-miner-crawler). Another window, 'Edit Parameter List: crawling rules', lists rules like 'follow_link_with_matching_url' and 'store_with_matching_url'. A third window, 'Edit Parameter List: xpath queries', lists attributes and their corresponding XPath expressions, such as 'Unit Purchase Price' with the expression '//h:span[contains(., 'Starting at') and @class='startText']/h:spc'. A fourth window, 'Extract Information', shows configuration for 'xpath queries' and 'namespaces'.

Implementation to Support Commodity Pricing Data Collection

- Processes have been created to crawl Dell, HP and TigerDirect for pricing and performance data for:
 - Laptops
 - Workstations
 - Tablets
 - Printers
 - Storage Devices
 - Servers
 - Other Supporting Hardware
- These processes create Excel files that are directly importable into the IT Hardware TrueFindings® database
- This database can be updated in several hours to support monthly or quarterly updates of the database

Implementation to Support Commodity Pricing Data Collection

- These data points can also be accessed via the File New Template Search in TruePlanning 16.0 for immediate drag and drop into a project file.

The screenshot illustrates the process of adding commodity pricing data to a project file. It shows the 'New' menu on the left, a search for 'IT Hardware' in the top bar, and a file explorer view of the 'IT Hardware' folder. A blue arrow points from the search results to the file explorer. The file explorer lists various IT hardware items, including laptops, tablets, and servers. The 'New Inspiron 11 3000 2-in-1' laptop is highlighted. To the right, a detailed spreadsheet for this device is shown, including fields for Start Date, Device Information, Project Details, Purchase Inputs, Supporting Details, and Integration Information.

- PRICE intends to update and extend the IT Hardware Commodity database
 - Regular updates with the existing processes that have been developed
 - Developing new processes based on user requirements & suggestions
- We are currently investigating the feasibility of creating similar processes to support the IT Software pricing requirements
 - This may be problematic because many software applications require calls to the vendor for quotes – we're hopeful we may be able to find sources
- We are considering extending this project to include commodity prices for electronic components to support Microcircuit cost estimation
- We would like to apply this expertise to develop custom solutions for clients based on their specific purchasing processes
