CALL FOR A FAST (F) MISSION OPPORTUNITY IN ESA'S SCIENCE PROGRAMME

16 July 2018

The ESA Director of Science solicits proposals from the scientific community in ESA Member States for a Fast (F) mission to be launched in the 2026-2028 timeframe.

This Call for a Fast mission aims at defining a mission of modest size (wet mass less than 1000 kg) to be launched towards the Earth-Sun L2 Lagrange point as a co-passenger to the ARIEL M mission, or possibly the PLATO M mission. From L2 the mission should reach its target orbit or destination with its own propulsion system.

The Call is open to all areas of space science. Any scientific goal and spacecraft technical configuration will be considered, including missions aiming at multi-point scientific measurements, for example, Near-Earth Objects or Main Belt comets, considered in the studies performed by ESA following the Call for New Science Ideas issued in 2016.

Phase 0: Call for Proposals

SCHEDULE FOR THIS CALL AND IMPORTANT DATES	
Release of Call for a Fast (F) mission	16 July 2018
Phase-1 proposal submission deadline	25 October 2018 - 12:00 (noon) CEST
Phase-1 proposal assessment	November 2018
Workshop for Phase-2 proposers	11 December 2018
Phase-2 proposal submission deadline	20 March 2019 – 12:00 (noon) CET
Letters of Endorsement deadline	10 April 2019 - 12:00 (noon) CEST
Proposal evaluation and scientific ranking	April – July 2019
Phase 0 study	July – December 2019
Selection of candidate mission	February 2020
Phase A/B industrial kick-off	September 2020
Mission adoption	November 2022
Mission CDR	June 2024
Spacecraft launch readiness	December 2027

Slide 15

Industrial Cost Risk

Technical Risk

Development Status Risk (related to TRL -> use a table with cost risk% vs TRL)

○ Programmatic Risk

○ Industrial Procurement Risk (e.g. price increases)

UNCLASSIFIED - For Official Use Presented at the 2019 ICEAA Professional Development & Training Workshop - www.iceaaonline.com

Maturity Risk

Design Maturity Risk (unknown risks)

O Costing Model Accuracy Risk

Overall ~ 30% on Industry Phase B2/C/D/E1 proven reasonable for most cases

Slide 16

Agency Cost Risk

- Launch price increases
- **Mission and Science Operations cost increases**

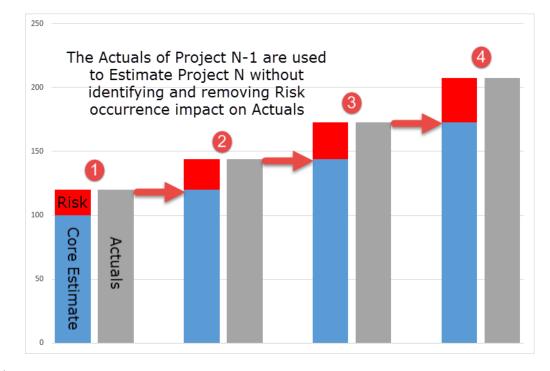

- Agency project team cost increases (due to schedule stretch and/or the need for a larger project team)
- [•] Unknown Industrial risks (Class-A Contract Change Notices, funding) issues complicating the project organisation and schedule, etc.).

For this part recommend \geq 15% on total Industrial Phase B2/C/D/E1 cost including Industrial risk margin + ESA internal project cost

Estimate logic schematic

Slide 20

Conclusions

• Principles presented here allow early cost estimates in relatively little time based on little input.

• The estimates can be improved and further detailed as the conceptual definition progresses.

 The method has been implemented in various ESA Science and Earth Observation "calls for ideas", with satisfactory results.
